Running a Python File

Running a Python File

- Creating a python file using shell

Running a Python File

- Creating a python file using shell

- Running it using shell

Creating a Python File

A python file is a text file

nano python_file.py

Creating a Python File

A python file is a text file

nano python_file.py

python3 python_file.py

Demonstration

Demonstration

Open Terminal
make a "python_file.py" using nano text editor
write some program inside a function "hello something" and call that function
save and exit.
run the code using "**python3 python_file.py**"
comment on the output
THANK YOU
